ML COURSE

1) IntroductionToCourse
2) ProbabilityCourse
3) Everything you need to know about Linear Algebra
4) Python Programming Fundamentals
5) Scientific Computation and Working with Data
6) Working With Data-Pandas
7) Calculus
8) SQL (Structured Query Language)
9) Comprehensive Intro to ML
10) Become a REGRESSION master
11) Logistic Regression
12) MLOps Fundamentals & Project
13) Retail Price Optimisation MLOps Project
14) Naive Bayes
15) Resampling Methods & Regularisation
16) Classification Measures
17) Decision Trees
18) Feature Engineering
19) Ensemble Learning
20) Unsupervised Learning Algorithms
21) Neural Nexus - End to End Project by Tejas Sunil
22) Diabetes Prediction System (Entirely based on Model Training)
